DETAILED ACTION

1. Claims 4-12 and 17-25 are allowed.

The following is an examiner's statement of reasons for allowance: for claims 4, and 17, the primary reason for allowance of these claims is the inclusion of, inter alia, the differential amplifier which receives an output voltage from the voltage dividing circuit and outputs an amplified (or attenuated) signal with an arbitrary sign and supplies the amplified/attenuated signal as the control voltage to the fully differential amplifier, wherein the sign of an amplification factor of the differential amplifier is chosen so that a common-mode feedback system is the common-mode feedback circuit becomes a negative feedback system, based on a transfer function of an output common-mode voltage produced in response to the control voltage supplied to the fully differential amplifier.

And for claims 5-12, and 18-25, the primary reason for allowance of these claims is the inclusion of, among other things, the voltage dividing circuit having two impedance circuits dividing the voltage across the two output ends of the fully differential amplifier, and at least one capacitive elements each connected between a fixed potential and a midpoint at which the voltage is divided by the impedance circuits. The best prior art of record (see the cited references) discloses common-mode feedback circuits. However, the prior fails to teach the above features of claims 4-12 and 17-25. Therefore, these claims are allowed.
